

human influences the interaction

Table lamp

Humans decides when to use the lamp, the intensity of the light and also, we are the ones who adjusts the height of the lamp according to our requirements.

machine influences the interaction

Clock

Clocks influence human behaviour as it provides a constant reference for time. When people look at a clock, it helps them manage their day and stick to schedules. So, having a clock around shapes how humans plan and organize their day or activities.

human and machine equally influence the interaction

Fan

When we switch on a fan, humans decide when to turn the fan on but the comfort it provides influences you to turn it off.

While the fan is primarily a human-controlled tool, the machine can influence human behaviour through its automatic features and the comfort it provides.
